

training technicians and customers, and its separate shop for R&D and custom machines.

According to the company, waterjet cutting has many advantages, including its relative quietness and cleanliness when cutting under water, the fact that it does not create a heat-affected zone and the simplicity of the workholding, which Mr. Bruner says can include weights and clamps instead of the precision fixturing required for complex metalcutting methods.

Celeritive Technologies Joins Orderfox.com as Strategic Partner

Following the announcement that Autodesk is becoming a strategic partner of Orderfox.com, the website has announced that Celeritive Technologies Inc., developer of VoluMill and VoluTurn, is also partnering with Orderfox.com.

“At Orderfox.com, we look at operational efficiencies not just from a capacity standpoint, but also in regards to how members can benefit from focused research, industry knowledge and cost-saving measures through the use of proper

solutions,” says Brian J. Smith, Orderfox.com America president. “As we analyzed the status of the industry and where we think it will lead in the future, regardless of physical locations, we feel that having the right partners in place will provide added benefits. And utilizing the right tools like what Celeritive offers will ultimately and effectively provide our community members a competitive advantage.”

“With more than a decade of success in helping manufacturers identify profit and revenue opportunities, Celeritive’s decision to partner with Orderfox.com was simple,” says Greg Saisselin, vice president of sales and marketing for Celeritive Technologies. “It’s easy to understand the value and benefits for our larger customers who are actively seeking job shop services, or for job shops looking to gain exposure into a much broader global market.”

With this new partnership comes the launch of VoluMill Nexion Essentials, >>

Marposs Acquires High-Accuracy Laser Micrometer Manufacturer

Marposs has announced the acquisition of Aeroel srl (Pradamano, Italy), a designer and manufacturer of high-accuracy laser micrometers and laser gages for non-contact diameter measurement and control. Main markets include the wire, appliance, aerospace, automotive and oleo-dynamics manufacturing industries in which the technologies are applied to assure dimensional consistency and product quality, helping to improve process efficiency while reducing scrap and labor.

Marposs intends to integrate the Aeroel offering into its brand of measurement and inspection offerings, extending its market reach into new areas such as plastic extrusion of tubes, rods and cables, as well as copper-wire enamel coating.

For the machining sector, the company offers automatic laser solutions suitable for measuring diameters, lengths, roundness, taper and runout of cylindrical sections of turned or ground cylindrical components such as motor shafts, hard metal blanks, drill bits and cutting tools.

Suitable for online or offline applications, the products are typically merged into an automated solution by machine manufacturers or system integrators. Solutions are available for online and benchtop diameter-measurement systems for machined products.

MW120II NEWLY DESIGNED GANTRY LOADER AND IDLE TIME IMPROVEMENTS

muratec

LIGHTWEIGHT AND LIGHTNING-FAST GANTRY LOADER

- ✓ IDLE TIME IMPROVEMENTS
- ✓ ENHANCED HEADSTOCK SHAPE
- ✓ RELOCATED Z-AXIS BALL SCREW AND TURRET BAR
- ✓ IMPROVED TURRET SHAPE
- ✓ ENHANCED X-AXIS LINEAR GUIDE

INCREASED GANTRY SPEEDS

- ✓ X-AXIS 50%
- ✓ Y-AXIS 46%
- ✓ Z-AXIS 86%

AS SEEN AT IMTS
